Preface	vii
Introduction	1
0.1 Coxeter Groups and Coxeter Complexes	2
0.2 Buildings as Simplicial Complexes	4
0.3 Buildings as W-Metric Spaces	5
0.4 Buildings and Groups	6
0.5 The Moufang Property and the Classification Theorem	6
0.6 Euclidean Buildings	7
0.7 Buildings as Metric Spaces	7
0.8 Applications of Buildings	8
0.9 A Guide for the Reader	8
1 Finite Reflection Groups	9
1.1 Definitions	9
1.2 Examples	11
1.3 Classification	15
1.4 Cell Decomposition	17
1.4.1 Cells	17
1.4.2 Closed Cells and the Face Relation	19
1.4.3 Panels and Walls	21
1.4.4 Simplicial Cones	23
1.4.5 A Condition for a Chamber to Be Simplicial	24
1.4.6 Semigroup Structure	25
1.4.7 Example: The Braid Arrangement	28
1.4.8 Formal Properties of the Poset of Cells	29
1.4.9 The Chamber Graph	30
1.5 The Simplicial Complex of a Reflection Group	35
1.5.1 The Action of W on $\Sigma(W, V)$	36
1.5.2 The Longest Element of W	40
1.5.3 Examples	41

1.5.4	The Chambers Are Simplicial	45
1.5.5	The Coxeter Matrix	48
1.5.6	The Coxeter Diagram	49
1.5.7	Fundamental Domain and Stabilizers	51
1.5.8	The Poset Σ as a Simplicial Complex	52
1.5.9	A Group-Theoretic Description of Σ	53
1.5.10	Roots and Half-Spaces	55
1.6	Special Properties of Σ	58
1.6.1	Σ Is a Flag Complex	59
1.6.2	Σ Is a Colorable Chamber Complex	59
1.6.3	Σ Is Determined by Its Chamber System	62
2	Coxeter Groups	65
2.1	The Action on Roots	65
2.2	Examples	67
2.2.1	Finite Reflection Groups	67
2.2.2	The Infinite Dihedral Group	67
2.2.3	The Group $\text{PGL}_2(\mathbb{Z})$	71
2.3	Consequences of the Deletion Condition	78
2.3.1	Equivalent Forms of (D)	78
2.3.2	Parabolic Subgroups and Cosets	80
2.3.3	The Word Problem	85
*2.3.4	Counting Cosets	88
2.4	Coxeter Groups	91
2.5	The Canonical Linear Representation	92
2.5.1	Construction of the Representation	93
2.5.2	The Dual Representation	95
2.5.3	Roots, Walls, and Chambers	96
2.5.4	Finite Coxeter Groups	97
2.5.5	Coxeter Groups and Geometry	99
2.5.6	Applications of the Canonical Linear Representation	100
*2.6	The Tits Cone	102
2.6.1	Cell Decomposition	103
2.6.2	The Finite Subgroups of W	105
2.6.3	The Shape of X	107
*2.7	Infinite Hyperplane Arrangements	107
3	Coxeter Complexes	115
3.1	The Coxeter Complex	115
3.2	Local Properties of Coxeter Complexes	119
3.3	Construction of Chamber Maps	124
3.3.1	Generalities	124
3.3.2	Automorphisms	125
3.3.3	Construction of Foldings	126
3.4	Roots	128

3.4.1	Foldings	129
3.4.2	Characterization of Coxeter Complexes	138
3.5	The Weyl Distance Function	144
3.6	Products and Convexity	146
3.6.1	Sign Sequences	147
3.6.2	Convex Sets of Chambers	148
3.6.3	Supports	149
3.6.4	Semigroup Structure	150
3.6.5	Applications of Products	156
3.6.6	Convex Subcomplexes	158
3.6.7	The Support of a Vertex	167
3.6.8	Links Revisited; Nested Roots	169
4	Buildings as Chamber Complexes	173
4.1	Definition and First Properties	173
4.2	Examples	177
4.3	The Building Associated to a Vector Space	182
4.4	Retractions	185
4.5	The Complete System of Apartments	191
4.6	Subbuildings	194
4.7	The Spherical Case	195
4.8	The Weyl Distance Function	198
4.9	Projections (Products)	202
4.10	Applications of Projections	204
4.11	Convex Subcomplexes	207
4.11.1	Chamber Subcomplexes	208
*4.11.2	General Subcomplexes	209
*4.12	The Homotopy Type of a Building	212
*4.13	The Axioms for a Thick Building	214
5	Buildings as W-Metric Spaces	217
5.1	Buildings of Type (W, S)	217
5.1.1	Definition and Basic Facts	218
5.1.2	Galleries and Words	221
5.2	Buildings as Chamber Systems	223
5.3	Residues and Projections	226
5.3.1	J -Residues	226
5.3.2	Projections and the Gate Property	229
5.4	Convexity and Subbuildings	233
5.4.1	Convex Sets	233
5.4.2	Subbuildings	235
*5.4.3	2-Convexity	237
5.5	Isometries and Apartments	238
5.5.1	Isometries and σ -Isometries	238
5.5.2	Characterizations of Apartments	240

5.5.3	Existence of Apartments	242
5.5.4	Roots	245
5.6	W-Metric Spaces Versus Chamber Complexes	246
5.7	Spherical Buildings	254
5.7.1	Opposition	254
*5.7.2	A Metric Characterization of Opposition	255
5.7.3	The Thin Case	257
5.7.4	Computation of σ_0	258
5.7.5	Projections	260
5.7.6	Apartments	262
5.7.7	The Dual of a Spherical Building	263
*5.8	Twin Buildings	266
5.8.1	Definition and First Examples	266
5.8.2	Easy Consequences	269
5.8.3	Projections and Convexity	270
5.8.4	Twin Apartments	275
5.8.5	Twin Roots	282
5.9	A Rigidity Theorem	286
5.10	An Extension Theorem	289
*5.11	An Extension Theorem for Twin Buildings	290
*5.12	Covering Maps	291
6	Buildings and Groups	295
6.1	Group Actions on Buildings	295
6.1.1	Strong Transitivity	296
6.1.2	Example	298
6.1.3	Weyl Transitivity	300
6.1.4	The Bruhat Decomposition	302
6.1.5	The Strongly Transitive Case	303
6.1.6	Group-Theoretic Consequences	304
6.1.7	The Thick Case	306
6.1.8	Stabilizers	307
6.2	Bruhat Decompositions, Tits Subgroups, and BN-Pairs	307
6.2.1	Bruhat Decompositions	307
6.2.2	Axioms for Bruhat Decompositions	309
6.2.3	The Thick Case	312
6.2.4	Parabolic Subgroups	315
6.2.5	Strongly Transitive Actions	317
6.2.6	BN-Pairs	319
6.2.7	Simplicity Results	322
*6.3	Twin BN-Pairs and Twin Buildings	325
6.3.1	Group Actions on Twin Buildings	325
6.3.2	Group-Theoretic Consequences	328
6.3.3	Twin BN-Pairs	330
6.4	Historical Remarks	335

6.5	Example: The General Linear Group	338
6.6	Example: The Symplectic Group	340
6.7	Example: Orthogonal Groups	344
	6.7.1 The Standard Quadratic Form	344
	6.7.2 More General Quadratic Forms	348
6.8	Example: Unitary Groups	349
6.9	Example: SL_n over a Field with Discrete Valuation	351
	6.9.1 Discrete Valuations	351
	6.9.2 The Group $SL_n(K)$	354
	6.9.3 The Group $SL_n(K)$, Concluded	360
*6.10	Example: Weyl-Transitive Actions	364
	6.10.1 Dense Subgroups	364
	6.10.2 Dense Subgroups of $SL_2(\mathbb{Q}_p)$	364
*6.11	Example: Norm-1 Groups of Quaternion Algebras	365
	6.11.1 Quaternion Algebras	365
	6.11.2 Density Lemmas	368
	6.11.3 Norm-1 Groups over \mathbb{Q} and Buildings	369
*6.12	Example: A Twin BN-Pair	371
7	Root Groups and the Moufang Property	375
7.1	Pre-Moufang Buildings and BN-Pairs	375
7.2	Calculation of Fixers	380
	7.2.1 Preliminaries: Convex Sets of Roots	380
	7.2.2 Fixers	382
7.3	Root Groups and Moufang Buildings	385
	7.3.1 Definitions and Simple Consequences	385
	7.3.2 Links	387
	7.3.3 Subbuildings	389
	7.3.4 The Building Associated to a Vector Space	390
7.4	k -Interiors of Roots	393
7.5	Consequences of the Rigidity Theorem	400
7.6	Spherical Buildings of Rank at Least 3	402
7.7	Group-Theoretic Consequences of the Moufang Property	403
	7.7.1 The Groups U_{\pm} , B_{\pm} , and U_w	403
	7.7.2 Commutator Relations	407
	7.7.3 The Role of the Commutator Relations	408
	7.7.4 The Structure of $[\alpha, \beta]$	409
7.8	RGD Systems of Spherical Type	411
	7.8.1 The RGD Axioms	411
	7.8.2 Rank-1 Groups	413
	7.8.3 The Weyl Group	417
	7.8.4 The Groups U_w	421
	7.8.5 The BN-Pair and the Associated Moufang Building ..	426
	7.8.6 The Kernel of the Action	430
	7.8.7 Simplicity Results	431

7.9	Examples of RGD Systems	432
7.9.1	Classical Groups	432
7.9.2	Chevalley Groups	440
*7.9.3	Nonsplit Algebraic Groups	443
8	Moufang Twin Buildings and RGD Systems	449
8.1	Pre-Moufang Twin Buildings and Twin BN-Pairs	449
8.2	Calculation of Fixers	452
8.2.1	Preliminaries: Convex Sets of Twin Roots	452
8.2.2	Fixers	453
8.3	Root Groups and Moufang Twin Buildings	454
8.3.1	Definitions and Simple Consequences	454
8.3.2	Example	456
8.4	2-Spherical Twin Buildings of Rank at Least 3	457
8.5	Group-Theoretic Consequences of the Moufang Property	459
8.5.1	The Groups U_{\pm} , B_{\pm} , and U_w	459
8.5.2	Commutator Relations	462
8.5.3	Prenilpotent Pairs	463
8.6	General RGD Systems	466
8.6.1	The RGD Axioms	466
8.6.2	The Weyl Group	468
8.6.3	The Groups U_w	471
8.6.4	The Building $\mathcal{C}(G, B_+)$	473
8.7	A 2-Covering of $\mathcal{C}(G, B_+)$	476
8.7.1	The Chamber System \mathcal{C}'	477
8.7.2	The Morphism $\kappa: \mathcal{C}' \rightarrow \mathcal{C}_+$	479
8.7.3	The Groups U'_w	479
8.7.4	Spherical Residues	481
8.7.5	The Main Result	483
8.8	Algebraic Consequences	484
8.9	The Moufang Twin Building	486
8.10	A Presentation of U_+	487
8.11	Groups of Kac–Moody Type	491
8.11.1	Cartan Matrices	492
8.11.2	Finite-Dimensional Lie Algebras	493
8.11.3	Kac–Moody Algebras	494
8.11.4	The Weyl Group	495
8.11.5	Kac–Moody Groups	495
8.11.6	The Simply Laced Case	496
9	The Classification of Spherical Buildings	499
9.1	Introduction	499
9.2	Type A_n	501
9.3	Type C_n	502
9.4	Type D_n	503

9.5	Type E_n	504
9.6	Digression: Twisted Chevalley Groups	504
9.7	Type F_4	505
9.8	Type G_2	506
9.9	Type $I_2(8)$	506
9.10	Finite Simple Groups and Finite Buildings	506
*9.11	Remarks on the Simplified Proof	508
*9.12	The Classification of Twin Buildings	509
10	Euclidean and Hyperbolic Reflection Groups	511
10.1	Euclidean Reflection Groups	511
10.1.1	Affine Concepts	511
10.1.2	Formulas for Affine Reflections	513
10.1.3	Affine Reflection Groups	514
10.1.4	Finiteness Results	516
10.1.5	The Structure of C	517
10.1.6	The Structure of W , Part I	521
10.1.7	Example	523
*10.1.8	The Structure of W , Part II; Affine Weyl Groups	526
10.2	Euclidean Coxeter Groups and Complexes	530
10.2.1	A Euclidean Metric on $ \Sigma $	530
*10.2.2	Connection with the Tits Cone	533
*10.3	Hyperbolic Reflection Groups	537
10.3.1	Hyperbolic Space; Hyperplanes and Reflections	537
10.3.2	Reflection Groups in \mathbb{H}^n	539
10.3.3	Example	541
10.3.4	The Poset of Cells	542
10.3.5	The Simplicial Case	544
10.3.6	The General Case	545
*10.4	Hyperbolic Coxeter Groups and Complexes	546
11	Euclidean Buildings	549
11.1	CAT(0) Spaces	549
11.2	Euclidean Buildings as Metric Spaces	554
11.3	The Bruhat–Tits Fixed-Point Theorem	558
11.4	Application: Bounded Subgroups	561
11.5	Bounded Subsets of Apartments	565
11.6	A Metric Characterization of the Apartments	569
11.7	Construction of Apartments	573
11.8	The Spherical Building at Infinity	579
11.8.1	Ideal Points and Ideal Simplices	580
11.8.2	Construction of the Building at Infinity	582
11.8.3	Type-Preserving Maps	584
11.8.4	Incomplete Apartment Systems	585
11.8.5	Group-Theoretic Consequences	587

11.8.6	Example	590
11.9	Classification	592
*11.10	Moufang Euclidean Buildings	593
12	Buildings as Metric Spaces	597
12.1	Metric Realizations of Buildings	598
12.1.1	The Z -Realization as a Set	598
12.1.2	A Metric on X	601
12.1.3	From Apartments to Chambers and Back Again	604
12.1.4	The Effect of a Chamber Map	605
12.1.5	The Carrier of a Point of X	606
12.1.6	Chains and Galleries	607
12.1.7	Existence of Geodesics	610
12.1.8	Curvature	611
12.2	Special Cases	615
12.3	The Dual Coxeter Complex	617
12.3.1	Introduction	617
12.3.2	Examples	618
12.3.3	Construction of the Dual Coxeter Complex	620
12.3.4	Properties	622
12.3.5	Remarks on the Spherical Case	623
12.3.6	The Euclidean and Hyperbolic Cases	624
12.3.7	A Fundamental Domain	624
12.3.8	A CAT(0) Metric on X	626
12.3.9	The Gromov Hyperbolic Case: A CAT(-1) Metric	627
12.3.10	A Cubical Subdivision of Σ_d	628
12.4	The Davis Realization of a Building	629
13	Applications to the Cohomology of Groups	633
13.1	Arithmetic Groups over the Rationals	633
13.1.1	Definition	633
13.1.2	The Symmetric Space	634
13.1.3	The Cocompact Case	635
13.1.4	The General Case	636
13.1.5	Virtual Notions	638
13.2	S -Arithmetic Groups	639
13.2.1	A p -adic Analogue of the Symmetric Space	640
13.2.2	Cohomology of S -Arithmetic Groups: Method 1	641
13.2.3	Cohomology of S -Arithmetic Groups: Method 2	642
13.2.4	The Nonreductive Case	642
13.3	Discrete Subgroups of p -adic Groups	644
13.4	Cohomological Dimension of Linear Groups	645
13.5	S -Arithmetic Groups over Function Fields	647

14 Other Applications	651
14.1 Presentations of Groups	651
14.1.1 Chamber-Transitive Actions	652
14.1.2 Further Results for BN-Pairs	653
14.1.3 The Group U_+	654
14.1.4 S -Arithmetic Groups	654
14.2 Finite Groups	655
14.3 Differential Geometry	657
14.3.1 Mostow Rigidity	657
14.3.2 Further Rigidity Theorems	658
14.3.3 Isoparametric Submanifolds	658
14.3.4 Singular Spaces and p -adic Groups	659
14.4 Representation Theory and Harmonic Analysis	660
A Cell Complexes	661
A.1 Simplicial Complexes	661
A.1.1 Definitions	661
A.1.2 Flag Complexes	663
A.1.3 Chamber Complexes and Type Functions	664
A.1.4 Chamber Systems	668
*A.2 Regular Cell Complexes	670
A.2.1 Definitions and First Properties	670
A.2.2 Regular Cell Complexes from Polytopes	673
A.2.3 Regular Cell Complexes from Arrangements	674
A.3 Cubical Realizations of Posets	676
B Root Systems	681
B.1 Notation	681
B.2 Definition and First Properties	682
B.3 The Dual Root System	683
B.4 Examples	683
*B.5 Nonreduced Root Systems	684
C Algebraic Groups	685
C.1 Group Schemes	685
C.2 The Affine Algebra of G	687
C.3 Extension of Scalars	688
C.4 Group Schemes from Groups	688
C.5 Linear Algebraic Groups	689
C.6 Tori	690
C.7 Unipotent Groups	690
C.8 Connected Groups	691
C.9 Reductive, Semisimple, and Simple Groups	691
C.10 BN-Pairs and Spherical Buildings	691
C.11 BN-Pairs and Euclidean Buildings	693

C.12 Group Schemes versus Groups	693
Hints/Solutions/Answers to Selected Exercises	695
