Proof of
 $\text{Var}(d_i)$

Philadelphia
Crime Rates

- The slope b_1 of $\widehat{\text{Fare}} = b_1 \text{Distance} + b_0$ is the *average* increase in fare per extra mile.
- $\widehat{\text{Fare}} = 177 + .079 \cdot \text{Distance}$ and $\widehat{\text{Distance}} = -644 + 6.13 \cdot \text{Fare}$ are **different** lines!
- (Note $\frac{1}{.079} \neq 6.13$.)
- If you want to compute r on a TI-83/84, the place to look is `stat` → `calc` → `linreg`. And ONCE, you need to set `DiagnosticsOn` in the Catalog.

$$\text{Var}(d_i) = (1 - r^2) \text{Var}(y_i)$$

Airfare

Proof of
 $\text{Var}(d_i)$

Philadelphia
Crime Rates

Sample Variance: $\text{Var}(x_i) = \frac{1}{n-1} \sum (x_i - \bar{x})^2$

For paired data (x_i, y_i) ,

Sample Covariance: $\text{Cov}(x_i, y_i) = \frac{1}{n-1} \sum (x_i - \bar{x})(y_i - \bar{y})$

$$\text{So } r = \frac{\text{Cov}(x_i, y_i)}{s_x s_y}$$

Because $(a + b)^2 = a^2 + 2ab + b^2$

$$\text{Var}(a_i + b_i) = \text{Var}(a_i) + \text{Var}(b_i) + 2\text{Cov}(a_i, b_i).$$

$$\text{Var}(d_i) = (1 - r^2) \text{Var}(y_i)$$

Math 1710

Airfare

Proof of
 $\text{Var}(d_i)$

Philadelphia
Crime Rates

Because $(a + b)^2 = a^2 + 2ab + b^2$

$$\text{Var}(a_i + b_i) = \text{Var}(a_i) + \text{Var}(b_i) + 2\text{Cov}(a_i, b_i).$$

Apply this to:

$$\text{Var}(d_i) = \text{Var}(y_i - \hat{y}_i)$$

$$\text{Var}(d_i) = (1 - r^2)\text{Var}(y_i)$$

Apply this to:

$$\text{Var}(d_i) = \text{Var}(y_i - \hat{y}_i)$$

$$\begin{aligned}\text{Var}(y_i - (\bar{y} + b_1(x_i - \bar{x}))) &= \text{Var}((y_i - \bar{y}) - b_1(x_i - \bar{x})) \\ &= s_y^2 + b_1^2 s_x^2 - 2b_1 \text{Cov}(y_i - \bar{y}, x_i - \bar{x}) \\ &= s_y^2 + r^2 \frac{s_y^2}{s_x^2} s_x^2 - 2r \frac{s_y}{s_x} (rs_x s_y) \\ &= s_y^2 - r^2 s_y^2 \\ &= (1 - r^2) s_y^2.\end{aligned}$$

Now analyze without the Center City Outlier.

The point is we now get a very different regression line with a much higher r^2 .

Outliers matter!

Now transform from CR to $\frac{1}{CR}$. The point here is that transforming your data to get a form more appropriate to the assumptions of simple linear regression is an important activity. We don't cover it, but chapter 10 of BVD is all about this. This is just 1 example to raise the possibility in your mind.
