 $Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

The Z scores on parts (c) and (e) came out strangely.
Not as I had intended them to work out.
We'll take this into account in grading.

Problem 3 a)

Math 1710

The W's

Last Time

Don't always
use

$Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

A Bernoulli trial here refers to the time for one team to complete its task. We might refer to a 2 minute completion time as “success” and a 1 minute completion time as “failure.”

Problem 3 a)

Math 1710
Class 15

V4u

Problem 3 on
the Prelim

Thursday's
Lab

The W's

Last Time

Don't always
use
 $Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

A Bernoulli trial here refers to the time for one team to complete its task. We might refer to a 2 minute completion time as “success” and a 1 minute completion time as “failure.”

With this somewhat arbitrary choice, the number of extra minutes beyond 125 required is simply the total number of successes in $X = \text{Binomial}(125, .6)$. (*Binomial because it is the total number of successes . . .*)

Problem 3 b)

Math 1710
Class 15

V4u

Problem 3 on
the Prelim

Thursday's
Lab

The W's

Last Time

Don't always
use

$Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

We need only check the success/failure condition:
 $n = 125(.4) = 50 \geq 10$ and $n = 125(.6) = 75 \geq 10$. Since both of these check, we may approximate Binomial(125, .6) by a normal distribution with the same mean and standard deviation. The mean here is $np = 75$ and the standard deviation is $\sqrt{125(.6)(.4)} = 5.48$.

Problem 3 c)

The total number of minutes required is $Y = X + 125$. By part b), we may approximate Y by an $N(75 + 125, 5.48) = N(200, 5.48)$ model. We want $P(160 \leq Y \leq 170)$. The Z score of 170 is

$$\frac{170 - 200}{5.48} = -5.47$$

and the Z score of 160 is

$$\frac{160 - 200}{5.48} = -7.30.$$

Each of these Z scores is off the charts in table Z , so both $P(Z < -5.47)$ and $P(Z < -7.30)$ are less than .0001. Hence $P(160 \leq Y \leq 170) < .0001$; the probability is essentially 0.

Problem 3 c) Remark

Math 1710

Lab

The W's

Last Time

Don't always
use

$Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

Remark: Sorry for the distractingly extreme Z scores! In making up this problem, I had desired a mean of 175 for $X + 125$, but interchanged the .4 and .6 probabilities required to achieve that. Unfortunately, we did not catch this oversight during proof-reading.

Problem 3 d)

Math 1710
Class 15

V4u

Problem 3 on
the Prelim

Thursday's
Lab

The W's

Last Time

Don't always
use
 $Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

Using an $N(0, 1)$ picture, we see that the middle 80% corresponds to $-1.28 \leq Z \leq 1.28$. Hence the corresponding range for Y is from $200 - 1.28(5.48) = 200 - 7.01 = 192.99$ to $200 + 1.28(5.48) = 200 + 7.01 = 207.01$ minutes.

Problem 3 e)

The W's

Last Time

Don't always
use

$Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

Since the mean is 200 minutes, we expect that more than half the cars will require more than 195 minutes.

Problem 3 e) Remark

Math 1710
Class 15

V4u

Problem 3 on
the Prelim

Thursday's
Lab

The W's

Last Time

Don't always
use

$Q_1 - 1.5 \cdot IQR$

Contingency
Tables - Ch. 3

Remark: Had the mean been 175 as I thought when making up the question, this would have been a closer call. The Z score would have been $\frac{20}{5.48} = 3.65$ with $P(Z > 3.65) = 10^{-4}$. But with 10^5 cars, we'd still have expected to see something like 10 cars needing this much time.

Willie Mays' season home run totals are unimodal with a center of about 30 home runs per year. (The median is 31.5.) Most seasons fall within approximately 20 home runs of the median. The distribution is somewhat skewed to the left, mostly due to a number of low season totals near the end of his career.

Aaron's season home run totals have less spread than those of Mays. This is evident graphically or can be seen by comparing Aaron's IQR of 16.5 to Mays' 20. Aaron's median of 34 is somewhat higher than Mays' median of 31.5. Both distributions are skewed to the left.

Tables - Ch. 3

	1959	1970	1980	
Continuing Education	197	388	320	905
Employed	103	137	98	338
In the Military	20	18	18	56
Other	13	58	45	116
	333	601	481	1415

Our textbook considers the marginal dist of WhatDid to be:

WhatDid	Freq.	Rel. Freq.
Continuing Education	905	64%
Employed	338	24%
In the Military	56	4%
Other	116	8%
	1415	100%
