

STUDENT CONTRACT

These rules may seem to be arbitrary right now, but I've thought very carefully about how the rules of the course align with our goals.

Here are the simple rules for this course:

- You will be respectful of your classmates at all times, and doubly so during class time.
- You may freely use any theorems that we have discussed in class, but you should make it clear where you are using a previous result and which result you are using. For example, if a sentence in your proof follows from Exercise 1 of the Numbers handout or Proposition 1.41 of [TAP] (*The Art of Proof*), then you should say so.
- Unless you prove them, you cannot use any results that we have not yet covered.
- Unless you have received permission from me in advance, you are **NOT** allowed to consult external sources. This includes anybody outside of the class, other textbooks, and online resources. If you think you need additional resources, please come talk to me.
- You are **NOT** allowed to copy someone else's work.
- You are **NOT** allowed to let someone else copy your work.
- With the exception of in-class exams, you are allowed to discuss the problems from this course with each other and critique each other's work.

I will vigorously pursue anyone suspected of breaking these rules.

To convince me that you have read and understand the instructions, sign in the box below.
